

挡藻围隔

挡藻围隔是一种用于水体富营养化污染治理及拦截、围隔水域藻类植物扩散的新型产品，它可从水面至水底形成一道能挡住泥沙、悬浮物而水可自由透过的帘幕，不会阻碍水的自由流动又能将清洁区与污染区隔离开来，从而有力的保护了周围环境。

根据现场使用情况，可选择橡胶挡藻围隔、PVC 挡藻围隔

ALGAL BARRIER

The ALGAL BARRIER is a new product used to control eutrophication pollution of water and to intercept the diffusion of algae. It can form a curtain from the water surface to the bottom, which can block the sediment and suspended solids, and the water can pass through freely. It will not hinder the free flow of water, but also can separate the clean area from the pollution area, thus effectively protecting the surrounding environment.

According to the field use, the algae barrier can be made of rubber and PVC.
