

定位浮筒

定位浮筒是一种围油栏布放所需辅助设施，应用于围油栏在江河海洋中的定位和连接。采用滑道式连接结构与围油栏连接快捷方便，有效消除应力集中，防止围油栏接头部分的磨损和撕裂。

POSITIONING BUOY (PONTOON)

The POSITIONING BUOY (PONTOON) is used to facilitate the deployment of containment booms, specifically for the positioning and connection of the containment booms in rivers and seas. Using the tide slideway connecting structure to connect the containment booms makes connections swiftly and easily. This effectively eliminates the stress concentration and prevents the connecting part of the containment booms from wear and tear.
